PROJECTS & EXPERIENCE

[Weather App API](#)

- This is a weather application that shows the weather based on city. I built it using HTML5, CSS3 and Javascript

[Github user API](#)

- A useful web application that uses the Github API to work. It displays the user based on username. It was built in Javascript, React, HTML5 and CSS3.

[Crypto Voting application](#)

- I built this application for myself after falling in love with the crypto industry. After I finish this application, users can vote their favorite coin. Built in React Js

Security Guard - Edon - 2021 - present

- Perform patrol of the building.
- Control and monitor access to the building
- Perform report writing
